Registration page will be independent of the layout (probably)

Proposed Struct (design discussed with Harshit)

```
struct Data {  
    int pageNo;  
    String(or enum) SectionID;  
    SectionData data;  
    String questionStatement;  
    String assumedImageContext; // Experimental using GPT4  
    String(or enum) outputType; // eg Checkbox, Selectbox, input, etc  
    DATA value; // Stores a dictionary type of data with ID as well other  
value in response (like in mcq based questions)  
}
```
